

## **Recommendation for using Insights vs Argos.**

Reporting Tool Standard for Banner Cloud Modernization.

The ORU Cloud Modernization Project Management Team has determined that **Ellucian Insights** is the recommended and approved reporting standard for the Banner SaaS environment. This decision is based on a comprehensive evaluation of security protocols, data access efficiency, and direct integration with Banner data tables.

### **Reporting Conversion Policy:**

- All current Argos reports that require no additional programming logic will be converted to Insights.
- Each converted report will be validated and signed off by the designated end user to confirm data integrity, data accuracy, and data access efficiency.
- Argos reports requiring custom programming logic will be evaluated on a case-by-case basis, tested for data security compliance, and maintained in the Argos format where necessary.

**Conclusion:** Utilizing native reporting tools (**Ellucian Insights**) within the Ellucian Banner SaaS environment ensures consistent security standards, optimal performance, and reduced maintenance overhead for all universities.
