

Sending Form Result To Multiple Email Addresses

To send your form result to multiple email addresses, all you need to do is turn on the **Send Notification Emails to My Inbox** option and put all the email addresses under **Your Email Address**.

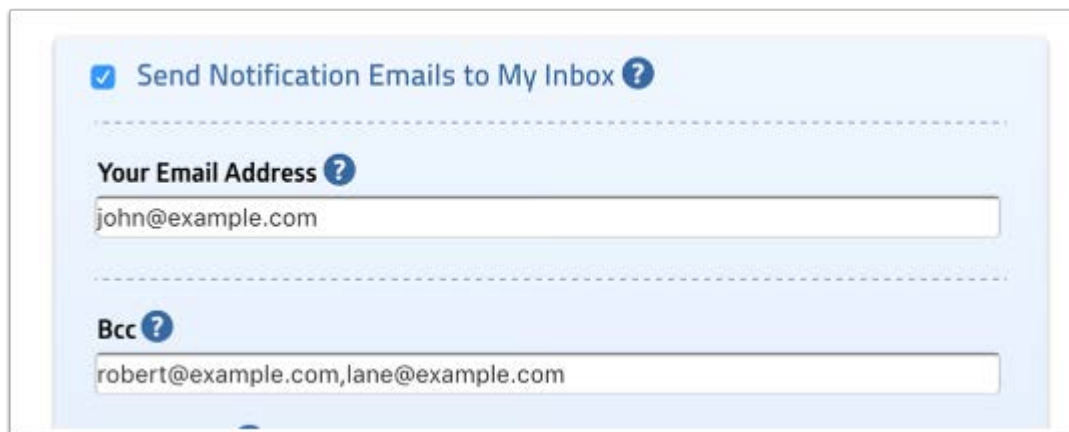

Separate multiple email addresses with commas (**Do NOT use semicolons**), like this:

billy@example.com,robert@example.com,sally@example.com

A screenshot of a form interface. At the top, there is a checked checkbox labeled "Send Notification Emails to My Inbox" with a question mark icon. Below this is a dashed horizontal line. Underneath the line is the label "Your Email Address" with a question mark icon. A text input field contains the email addresses "john@example.com,robert@example.com,lane@example.com". In the bottom right corner of the form area, there is a link labeled "more options" with a right-pointing arrow icon.

If you don't want each of those recipients to know each other email addresses, you can use the **Bcc** option instead. Put one email address to the **Your Email Address** and the rest under **Bcc**.

A screenshot of a form interface. At the top, there is a checked checkbox labeled "Send Notification Emails to My Inbox" with a question mark icon. Below this is a dashed horizontal line. Underneath the line is the label "Your Email Address" with a question mark icon. A text input field contains the email address "john@example.com". Below this is another dashed horizontal line. Underneath the second line is the label "Bcc" with a question mark icon. A text input field contains the email addresses "robert@example.com,lane@example.com".
